Presubscribed Interexchange Carrier (PIC) Change Charge Nonrecurring Cost Study

2005-2008

August 2005

SBC - Texas
Presubscribed Interexchange Carrier (PIC/LPIC) Change Charge
Service Order
Nonrecurring Cost Study
2005-2008

Overview and Methodology

Purpose

The purpose of this cost study is to provide updated costs for PIC Change orders. For reference, an acronym glossary is included as a separate tab within this cost study.

Service Description

Presubscription is a procedure whereby an end user may select and designate to the Telephone Company an Interexchange Carrier (IC) to access, without dialing an access code, for interLATA calls. This IC is referred to as the end user's primary IC. A charge associated with interLATA is a PIC.

Rate Element Descriptions

Combination Manual PIC/LPIC Charge, Cost per Change – Initial & Additional
Combination Mechanized PIC/LPIC Charge, Cost per Change – Initial & Additional

Note: The initial and additional rates are weighted together based on the percent of initial and additional PIC/LPIC changes. The initial and additional volumes are based on data from July 2004 through July 2005.

Nonrecurring Cost Methodology

Activity-Based Costing is a widely used method of identifying costs. The structure of an ABC study is based on the fact that activities performed by the company consume resources, and these resources have a specifically identifiable cost. Activities, then, are used to provide services. This gives a logical, easy-to-follow flow through the costing procedure.

Activity-Based Costing uses a number of specific terms, such as *resource*, *activity*, *cost object*, and *drivers* which have simple, yet special meanings.

- A *resource* can be a piece of equipment, a labor rate, or a vendor contracted expense.
- An *activity* is an action that consumes resources. The cost of the activity is calculated based on the cost of the resources that the activity consumes, and the resource driver, or the quantity of resources the activity consumes.
- A *cost object* is a product (i.e., PIC Change).
- *Drivers* are specific units that represent quantities of activities and resources. For example, time in minutes, or orders per line may be drivers. Resource drivers are the quantity of resources consumed by an activity. Activity drivers are the number of activities necessary to provide the service.

SBC - Texas
Presubscribed Interexchange Carrier (PIC/LPIC) Change Charge
Service Order
Nonrecurring Cost Study
2005-2008

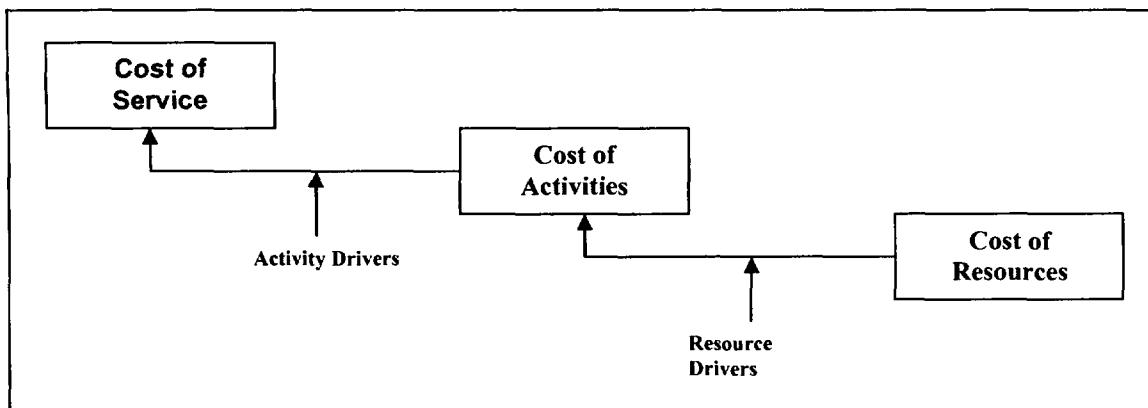

Overview and Methodology

The Basics of Activity-Based Costing are:

- Cost objects (i.e., services) are provided by activities.
- Activities consume resources.
- Consumption of resources drives costs.

Figure 1 illustrates the flow of Activity-Based Costing.

Figure 1

The rate structure in SBC - Southwest consists of a PIC Change charge for the “initial” line on an order and a separate PIC change charge for each “additional” line on that same order. In order to accurately account for this, times were gathered and separate costs were calculated for PIC Changes on both “Initial” and “Additional” lines. More specifically, the SMEs were asked to provide times and activities for each the “Initial” line with a PIC change on an order and each “Additional” line with a PIC change on the same order. The total time to provide a PIC Change on an “Additional” line on the same service order is shorter than the total time to provide a PIC Change on the “Initial” line on that service order because of efficiencies achieved on a multiple line order. For example, if there are 10 lines on the same service order, the Service Representative may have to spend time pulling up the customer’s account. This time would be allocated to the “Initial” PIC Change cost because this would have to be done even on an order with 1 line. However, there is no extra time spent doing this step because of the “Additional” lines, thus no time is allocated to changing the PIC on any “Additional” lines. This methodology ensures that the efficiencies achieved on a multiple line order are recognized in the costs.

Labor Rates

The labor rate represents the cost to SBC of a single hour of labor. The labor rate is inflated (based on the Consumer Price Index) to the midpoint of the study period to make the labor cost representative of the entire study period. A more detailed discussion of labor rates and inflation factors is found later in this methodology.

SBC - Texas
Presubscribed Interexchange Carrier (PIC/LPIC) Change Charge
Service Order
Nonrecurring Cost Study
2005-2008

Overview and Methodology

Line and Change Quantity Efficiency

End user may have more than one access line and ask to have their PIC changed on multiple lines on the same request (or order). In addition, on the same request, the same end user may also request LPIC changes on the same lines. There are efficiencies associated with performing PIC changes on multiple lines and performing a LPIC change at the same time as a PIC change. This efficiency is included in the cost results.

The SMEs provided time estimates that represent the total activity time required to make all changes on all lines on an average size request. In other words, the SMEs, based on their experience processing requests, estimated an average number of changes required on a request and provided the total time to process all changes. The Bill of Costs tab adjusts the per request manual costs to per change by multiplying the resulting business channel costs by orders per change (or the inverse of changes per order), thereby accounting for any line and change quantity efficiencies resulting from multiple lines or changes per line on the same request.

Inflation Factors

Inflation Factors are utilized to provide one cost over a multi-year period. The inflation factors are developed by using the forecast of the Consumer Price Index (CPI). The CPI represents changes in prices of all goods and services purchased for consumption by urban households. User fees (such as water and sewer service) and sales and excise taxes paid by the consumer are also included. Income taxes and investment items (like stocks, bonds, and life insurance) are not included.

Labor Rate Development Methodology

Labor rates identify the cost to the firm of consuming a particular resource—an hour of labor. Labor rates begin with a basic hourly wage or salary, and then include costs directly caused by labor that are not captured in the basic wage. These other direct labor costs include:

- break time and/or tour length costs,
- paid absence costs,
- special payments such as team awards and recognition,
- payroll taxes, pension costs, benefit costs,
- support assets, including capital costs associated with support assets
- Other direct costs such as travel and training, and clerical support and supervision.

SBC - Texas
Presubscribed Interexchange Carrier (PIC/LPIC) Change Charge
Service Order
Nonrecurring Cost Study
2005-2008

Overview and Methodology

Labor rates are developed at the proper level of detail to provide accurate costs for specific activities. First, SBC looks at specific groups of function codes (which designate a specific job function) or activity codes (which designate a specific job activity). These function/activity codes are part of SBC's functional accounting system used to report expenses company-wide. For example, 21XX is the group of all wages and expenses charged to function codes or activity codes that begin with "21", which in this example represents Operator Services functions and activities.

Within the specific group, SBC develops labor rates by Market Zone (for management employees) or Wage Category (for non-management employees). The Market Zone and Wage Category are specific job classifications that determine how much the company pays for a particular job.

The Labor rates in this study begin with an average wage per hour from payroll records. SBC derives relationships of expenses to wages, or expenses to hours worked, to develop labor factors or loadings that it then applies to basic wages to produce total hourly labor cost. All base labor rates in this study represent calendar year 2003. If SBC did not have current labor base rates for a particular state or job title, the most recent labor rate available was adjusted by bringing the basic wage portion of the labor rate current and updating the benefit factor using the most recent data available.

For more information, see separate Labor Rate Development documentation.

Cost Study Assumptions and Parameters

- LRIC Methodology
- Slamming costs are included in the PIC change charge
- Study period is 2005 – 2008
- Labor Rates are base year 2003 adjusted to 2006, which is the midpoint of the planning period (2005 – 2008)

NOTES:

- (1) Source "Input" Tab
- (2) Restate to Current and Inflation Calculations:

	Year	Value
Labor Rate Base Year	2003	
2004 Wage Increase	2004	2.0%
2005 Wage Increase	2005	2.5%
2006 Wage Increase	2006	2.5%
Inflation to midpoint based on union contract increases		1.0716

(3) All "weighted" groups above are located in various states, but can perform work for Texas customers. The weightings were based on the number of employees located in each state doing the work function.

Glossary	
ASC	Access Service Center Location where service representatives are employed. The ASC was previously called the ICSC (Interexchange Carrier Service Center).
BEASE	Business Easy Access Sales Environment A GUI application which interacts with SORD, Premise and other systems to format simple orders in SORD.
BOSS	Billing and Order Support System Allows on-line access to all detailed and up-to-date account information needed to carry out service center operations associated with customer account inquiries, the processing of adjustments and the performance of treatment activities.
CARE	Customer Account Record Exchange Application that interfaces with the interexchange carriers to provide them with tariffed FCC mandated billing information and optional ALDIS products.
CCP	Customer Choice Protection Formal name of Add Protection
Consumer	Separate Business Channel for the Consumer channel.
EASE	Easy Access Sales Environment Application used to negotiate orders.
GEM	Government/Education/Municipal Separate Business Channel for Government/Educational/Municipal customers.
ILEC	Incumbent Local Exchange Carrier The company that provides intralATA telecommunications within a franchised territory.
IVR	Interactive Voice Response Provides inquiry and update directly to the customer without service representative intervention. Many applications available including Spanish, Business and Residence functions. Routes appropriately if service representative support is required.
LPIC	Local Prescription Interexchange Carrier The Intralata carrier selected by the customer.
PIC	Presubscription Interexchange Carrier The Intralata carrier selected by the customer.
SCRT	Slamming Complaint Resolution Team This group resolves all customer slamming complaints.
Signature	Separate Business Channel for large business customers.
SORD	Service Order Retrieval & Distribution SORD is a mechanized, online service order processing system for SBC. It provides a means to create, store, edit, maintain and distribute requests to other involved work groups establishing, disconnecting or changing a customer's services and account.
Value (Medium)	Separate Business Channel for Medium sized business customers.
Value (Small)	Separate Business Channel for Small sized business customers.
